

extract_audio

```
graph TD; A[extract_audio] --> B[find_delay]; A --> C[find_rode]; B --> D[join_videos]; C --> D; D --> E[get_audio_from_video]; D --> F[gather]; E --> F;
```

The flowchart illustrates a sequence of steps. It begins with 'extract_audio' (red border), which branches into 'find_delay' (orange border) and 'find_rode' (green border). Both 'find_delay' and 'find_rode' lead to 'join_videos' (blue border). From 'join_videos', the flow splits into 'get_audio_from_video' (green border) and 'gather' (green border). Finally, 'get_audio_from_video' also leads to 'gather'.
